

Replace the trailer's latch with the security of the Lock Box.

Lock Box Security

Lock is permanently installed on the trailer door. Provides protection without the hassle of having to put on and take off a padlock at multiple stops. Reduces theft from driver forgetting to use padlock. Easy to install. Includes a high security ABLOY[®] lock cylinder which uses a series of disc tumblers that function like the tumblers in a bank safe.

Lock Box replaces the standard trailer latch. The end of the trailer handle is inserted in the latching lock on the Lock Box. Lock Box is spring loaded to automatically lock when the handle goes into the lock mechanism.
